

Magnetic Field Deficiency Syndrome (MFDS)

Reading Time 1 min.

The earth's magnetic field nourishes all life here on earth. It pulses frequencies known to the body and provides us with the "energy" necessary for the body to maintain self-preservation processes. The earth's magnetic field has been the primal energy resp. frequency of the earth for more than 5 billion years.

However, the earth's magnetic field has been in a state of flux for a few centuries – it becomes weaker from time to time. In the last 500 years, the intensity of the earth's magnetic field has decreased by around 50%. In addition, humans spend more and more time indoors, which shields them from the earth's primal energy.

This decrease in the earth's magnetic field in combination with the increase of electrosmog becomes more and more stressful for body and mind. We are talking about the magnetic field deficiency syndrome. Your body lacks the necessary energy for important self-preservation processes. Your "inner doctor" becomes weaker and your well-being decreases.

As early as 1975, Dr. Kyoichi Nakagawa, Director of Isuzu Hospital in Tokyo, explained that people suffering from complaints such as neck pain and headaches, chronic fatigue, fibromyalgia and forgetfulness etc. were actually suffering from magnetic field deficiency syndrome (MFDS). Dr. Nakagawa conducted a questionnaire survey of **11,648** people. The questionnaire included questions about the experience of therapy with magnetic fields. The participants in the studies had the following complaints:

On average, **94 percent** of those surveyed described the magnetic field application as **effective**. There were no undesirable side effects or aggravations for anyone. Numerous other studies, including a NASA study, does support this.

The B² a unique "PEMF* frequency jewel" is a masterpiece of our engineers in the field of wellness and fitness. By integrating earth resonance frequencies and natural magnetic fields, better known as the Schumann frequency/field. The B² becomes a stylish accessory that can have a positive effect on your well-being.
