

The Effects of the CENTROPIX Converter

Reading Time 4 min.

“Electrosmog” is on everyone's lips these days. The new mobile phone 5G network is currently being switched on, satellite frequencies, HAARP systems, Wi-Fi, LED lamps and much more are incessantly generating impulses through our biological body cells. These generated frequencies will become a burden to our body within the next few Decades. In epigenetics (Lipton) it is described that information (signals) on about 3,000 receptors, each human body cell, control life. Thus, natural, and technically originated impacts have an indisputable influence on cells, organs, and our body's organ systems.

Conclusion: “The information that is in the cell and surrounds it is the basis of health, cell division, development, and resilience of the organism – the human being” (Citing Lipton). Since the beginning of the Earth there have been electric, magnetic, and electromagnetic fields in nature. With this energy, we have gone from being single-celled organisms to human beings. Our body also makes its own electromagnetic fields. But the unnatural frequencies that have been digitally broadcast in large quantities over the last 20 years or so can be destructive to our biology.

From satellites, radio masts, surveillance systems, Wi-Fi, the devices we use and much more, stray fields of digital radio signals are streaming through our bodies. This not only generates electromagnetic fields in the vicinity, but also radio frequencies that transmit information. These radio frequencies are hardly measurable electromagnetic fields, but they deliver information to our cells which, according to the latest measurements in the context of epigenetics (Spork), are damaging frequencies for our life. These must now be weakened or even neutralized. At the same time, it is central to activate the body's own selfregulation (Eigenfeldregulation Meyl and Biophotonen Popp). We live in the 21st century and technology is advancing with giant strides – with its good and its bad/harmful sides. We encounter artificially generated electromagnetic fields practically everywhere. CENTROPIX does not try to shield these fields locally (cocooning), but it is important that the natural fields with which we have developed reach us (cf. resilience and health).

What is needed from the point of view of CENTROPIX is a correction of the information fields that are unknown to the body and, therefore, have a negative effect. This means that the actual radio beacon, i.e., information such as data transmission, telephone calls, etc., is neither affected in its function nor is the existing electromagnetic field altered. Measurements with conventional measuring instruments therefore do not produce any changed results. This only corrects the misinformation that can negatively influence our cells and our organism.

The principle of this corrective variant is well known in naturopathy (e.g., bioresonance, energy and information medicine, other traditional energy, and information applications). With CENTROPIX information regulation, counter frequencies to potential disturbance variables/fields are thus programmed on converters. This information cannot be read or measured in the electromagnetic field. Measurable electromagnetic fields are merely the carriers of these correction frequencies. Of course, they don't change. The correction signals are therefore transported exclusively by these waves. The CENTROPIX technology uses the traditional EMF signal to transmit information. Classical, traditional electrosmog regulation systems, some of which have been on the market for 30 years, mostly unchanged – i.e., which were developed BEFORE the digital revolution and built for the EMF world prevailing at that time, measure and correct the influence of the DIRECT field (EMF field). Today's findings show, however, that the problems of somatic cell biology are not caused by the “amount of current”, but rather by the information/signals that arise from the stray fields (undirected, i.e. scalar fields). Much more important for the CENTROPIX system is the information on said frequency fields. And this information is not measurable with the methods from electrical engineering (mW/m², Volt/m, Gaus etc.).

The Effects of the CENTROPIX Converter

Reading Time 4 min.

State-of-the-art energy measurement systems (cf. bioresonance measurements, bioenergy field measurements) measure the biological reaction of the CENTROPIX converters and distinguish the effects of the system with excellence! Emoto water crystal certificates, GDV Kirlian double-blind measurements, many before-and-after measurements by means of bioresonance technology, double-blind studies, observed by external university institutions with more than 250 test subjects, as well as several tens of thousands of measurements on users show what a fine and, at the same time, enormous effect the CENTROPIX converters have. By means of HRV measurements (heart rate variability) and other modern, scientifically recognized measuring methods, the effectiveness of the converters is also checked by the development department at CENTROPIX or external specialist institutions as part of further development. CENTROPIX always strives to collect data at all levels in order to optimize and further develop the products. Likewise, CENTROPIX cooperates with academic institutions in the verification of the effects within the framework of psychosocial sciences (sensitivities, resilience), since the human being is a bio-psychosocial entity. Over a hundred thousand users report enormously positive effects; probably the most recognized and important statement of all for CENTROPIX.

The approach of CENTROPIX becomes all the more understandable because it seeks the measurements in the health and well-being of the person. The positive information is made available, and the person takes it in when they need it. Through the so-called information field (Schmieke) the human being receives help for self-help within the framework of his individual health and self-regulation.

Conclusion: CENTROPIX metaphysics converters are constructed on a different theoretical approach than many other systems. They embrace the zeitgeist and correct the negative information that is emerging in today's age of digital revolution. The aim of CENTROPIX is to let people go through their life as "unencumbered" as possible. Thus, CENTROPIX does not start at the shielding of electromagnetic fields but uses exactly these to relieve people of them indirectly and independent of space. The goal for CENTROPIX customers is: a sense of well-being and an increase in selfregulation. But not because CENTROPIX controls it, only because CENTROPIX neutralizes the interfering loads!

"Helping people to help themselves" – that's CENTROPIX!
