

Curriculum vitae

NIK GLEIM

Nik Gleim has been a driving force in the field of PEMF technology for almost three decades. His passion and interest in the fascinating possibilities of this technology were practically born in his cradle. As a trained banker, he became self-employed back in 1996. This was the first step on a path that he never left.

He soon set up the first production facility for PEMF devices and established a successful sales organization in German-speaking countries. Nik Gleim networked, looked for exchange and constantly expanded his expertise and experience in this field.

A few years later, he became CEO of one of the world's largest PEMF companies with an international network. He expanded the organization's US business, managed more than 50 employees, took over the management of the medical-scientific department and supervised a large number of pioneering PEMF studies.

Nik Gleim is not only driven by technology and the social value of the PEMF application - he is also an entrepreneur through and through. His leadership and innovative strength were recognized early on with his nomination for Entrepreneur of the Year 2011 in Liechtenstein. He not only trained thousands of business partners, but also drove internationalization and led the development and expansion of over 25 markets.

In April 2021, he embarked on a new entrepreneurial chapter and established CENTROPIX Global AG, to which he brought all his knowledge, experience and passion for people's well-being. In the first three years, CENTROPIX Global AG was already able to develop several new products in the PEMF area and demonstrate its innovative strength with three patents. In addition, one of the largest studies in the PEMF area was set up.

Nik Gleim's company is now represented on 3 continents, has annual double-digit growth rates and is on a successful course that has not gone unnoticed in the world of business and medicine. Awards such as the Digital Business Award 2020, German Design Award 2022 or the US Top Doctor Magazine issue are proof of this.
